BEK
platform

Empowering Healthcare Organizations of all Sizes to Rapidly Find and Match Patients to Clinical Research Studies.

BEK leverages a team of clinical experts and harnesses the power of AI to rapidly enhance your ability to find and match patients to clinical research studies. The BEK Patient-Matching Platform transforms structured and unstructured data within electronic medical records (EMR). Our Human-Powered AI platform captures three times more clinical trial criteria to ensure the identification of more clinically qualified patients.

The BEK Patient-Matching Platform

Standardize entire EMR data, both structured and unstructured

- Transforms structured and unstructured data for unparalleled clinical research patient identification
- NLP Mapping of 400+ combined medical libraries
- Limited IT Implementation requirements (less than 4 hours)
- Nightly data refreshes as patients meet protocol I/E criteria

Conduct one feasibility across the entire research network in minutes

- The most advanced feasibility product available captures 300% more trial criteria than any other method
- Evaluate your entire research network all at once
- Detailed reporting on patient demographics and trial attrition to help improve your business development
- Proactively market your patient population to sponsors

Automate chart reviews that screen 100% of patients with over 90% accuracy

- Automated patient chart review for clinical trials
- Patient identification is more than 10 times faster than traditional methods
- Decreases the burden of manual tasks on research teams
- Every patient who is eligible for a trial is rapidly identified

Core Value to Healthcare Organizations

Increase Research Revenue
BEKplatform rapidly sifts through structured and unstructured medical records, helping sites clearly understand their patient population pre- and post-study award.

Expand Trial Portfolio
Speed up site feasibility and identify more protocol-eligible candidates leading to 10 times more qualified patients and 3 times more patients enrolled.

Increase Staff Efficiency
Automate chart review to match more qualified potential participants, saving site coordinators hundreds of hours. BEK optimizes resources so researchers can allocate more time to enrolling and seeing patients.

Increase Diversity of Trials
Our solution extracts over 90% of eligibility criteria, allowing you to curate your ideal patient selection.
